

Communications and Journalism Volunteers

Do you want to become a communications expert or journalist?

Are you interested in science, specifically brain development, the application of a big-data approach to brain research (neuroinformatics), and research into mental illnesses and neurodegenerative disease?

Do you want your **CV to demonstrate hands-on-experience** in any of the following:

- Website management, including content development.
- Writing and publishing articles that help translate and communicate the latest scientific findings to the general population.
- Social media planning and content production: Facebook, LinkedIn, Twitter and YouTube.
- Developing dynamic visual content (video, photos, etc.).
- Event production and management (lectures, symposiums, international conferences).

The **Ludmer Centre for Neuroinformatics & Mental Health** is looking for dynamic volunteers in communication and journalism! Time commitment is flexible.

The Ludmer Centre is a transdisciplinary, multi-centre research collaboration advancing a big-data approach to innovative research in normal brain development and disorders - research encompassing neurological disorders, from Alzheimer's to Parkinson's, and mental illnesses, from anxiety disorders to schizophrenia.

My mentorship credentials: Check out my [LinkedIn profile](#). In addition to 20 years of experience working in the non-profit sector, nationally and internationally, I helped develop an international media service dedicated to humanitarian issues: irinnews.org. I can provide you with journalistic guidance, a chance to develop your creative ideas, and a space to try them out.
